The invention relates to the use of an antibody and/or chemokine construct that binds a chemokine receptor for preparing a pharmaceutical composition for eliminating cells latently infected with a primate immunodeficiency virus (e.g. human immunodeficiency virus (HIV-I). They are used in gene therapy and as vaccines. The antibody and/or chemokine construct is also used for preparing a pharmaceutical composition for treating, preventing and/or alleviating immunological disorders including autoimmune diseases (e.g. multiple sclerosis, type I diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel antibody specifically recognizing phosphatidylinositol-3,4,5-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead Salmonella genus microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunoassay containing a step in which the above antibody or its variable region is reacted with PIP3 present in a sample and the bond based on their immunological reaction. The method can determine PIP3 easily in a high sensitivity. This sequence represents the murine PIP3 recognizing monoclonal antibody variable region heavy chain complementarity determining region, CDR2 described in the method of
                                                                                                                                                                                                                     Use of an antibody and/or chemokine construct that binds to a chemokine receptor, for eliminating cells latently infected with primate immunodeficiency virus, or treating, preventing and alleviating immune

                                                                                                                                                                                                                                                                                                                          This invention describes a novel antibody specifically recognizing phosphatidylinositol-3,4,5-triphosphate (PIP3). The antibody of the invention is used in immunogenic compositions in which a dead salmonella genus microbe is used as an adjuvant and mixed with PIP3. The antibody can be used in an immunoassay containing a step in which the above antibody or its variable region is reacted with PIP3 present in a sample and the bond based on their immunological reaction. The method can determine PIP3 easily in a high sensitivity. This sequence represents the murine PIP3 recognizing monoclonal antibody variable region light that the process of the market of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the content of the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the indescribed in the in

They are used in gene therapy and as vaccines. The antibody and/or chemokine construct is also used for preparing a pharmaceutical composition for treating, preventing and/or alleviating immunological disorders including autoimmune diseases (e.g. multiple sclerosis, type I diabetes and rheumatoid arthritis), allergic diseases, skin diseases (e.g. skin inflammatory diseases such as inflammatory joint diseases (chronic arthritis), inflammatory renal diseases and inflammatory bowel diseases and graft versus host and transplant rejections. The present sequence is murine MC-1 antibody light chain variable domain (VL)(1). This antibody is specific for

                                                                                                                                                                                                                                                                       The invention relates to the use of an antibody and/or chemokine construct that binds a chemokine receptor for preparing a pharmaceutical composition for eliminating cells latently infected with a primate immunodeficiency virus (e.g. human immunodeficiency virus (HIV-1). They are used in gene therapy and as vaccines. The antibody and/or chemokine construct is also used for preparing a pharmaceutical composition for treating, preventing and/or alleviating immunological disorders including autoimmune diseases (e.g. multiple sclerosis, type I diabetes and rheumatoid arthritis), allergic diseases, skin diseases (e.g. skin inflammatory diseases such as inflammatory joint diseases (e.g. multiple sclerosis, type I diabetes and inflammatory joint diseases (chronic arthritis), inflammatory renal diseases and graft versus host and transplant rejections. The present sequence is CCR5xCD3 bispecific single chain antibody construct. This antibody construct comprises of murine MC-1 antibody specific for human chemokine receptor 5 (CCR5) and VH and VL domains of an antibody specific for a CD3 antigen joined

                                                                                                                                                                                                                                                                                                                                 monocytogenes and related organisms, and for studying genetic polymorphisms and orther genome sequence and fragments of componytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein composition of the present invention. Proteins composition of L. monocytogenes and related organisms, and for raising specific contibodies, identification of L. monocytogenes and related organisms, and composition of L. monocytogenes and related organisms, and composition of L. monocytogenes and related organisms, and composition of L. monocytogenes and cell replication compositions for the tregulate gene expression and cell replication and modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are also useful for compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

Compositions for the treatment or prevention of infections by L. monocytogenes and related organisms.

Compositions for the treatment or prevention of the printed composition, but was obtained in electronic format directly from WIPO at fife, wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTs). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention.

                                                                                                                                                                                                                                                                                                                            Calf thymus DNA was used to immunise a MRL-lpr mouse, spleen ce from which were then fused with Sp2/0 myeloma cells to give hybridomas producing the anti-DNA MAb. 9f11 was found to react strongly with single stranded DNA and poly(dT), and weakly with poly(dG).
                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the light chain variable region of the anti-DNA monoclonal antibody (MAb) 9f11, which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephritis and systemic lupus erythematosus. It can also be used to generate reagents to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-DNA antibody which specifically binds DNA hairpin - useful develop prods. for diagnosis and treatment of disorders, e.g. glomerulonephritis or systemic lupus erythematosus

                                                                                                                                                                                                                  Calf thymus DNA was used to immunise a MRL-lpr mouse, spleen ce from which were then fused with $p2/0 myeloma cells to give hybridomas producing the anti-DNA MAb. 15b10 was found to react strongly with single stranded DNA and poly(dT), and weakly with
                                                                                                                                                                                                                                                                                  The present sequence is the light chain variable region of the anti-NNA monoclonal antibody (MAb) 15b10, which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephritis and systemic lupus erythematosus. It can also be used to generate reagents to screen
                                                                                                                                                                                                                                                                                                                                                                                                     Anti-DNA antibody which specifically binds DNA hairpin - useful to develop prods. for diagnosis and treatment of disorders, e.g. glomerulonephritis or systemic lupus erythematosus

                                                                                                                                                         The present sequence is the light chain variable region of the anti-DNA monoclonal antibody (MAb) 5f3, which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephritis and systemic lupus erythematosus. It can also be used to generate reagents to screen for pharmaceutical agents, and treat and/or prevent an above
                                                                                                              Calf thymus DNA was used to immunise a MRL-1pr mouse, spleen cells from which were then fused with Sp2/0 myeloma cells to give hybridomas producing the anti-DNA MAb.
                                                                                                                                                                                                                                                                                        Anti-DNA antibody which specifically binds DNA hairpin - undevelop prods. for diagnosis and treatment of disorders, e glomerulonephritis or systemic lupus erythematosus

                                                                                                                                                                            by Mulv reverse transcriptase. The primers used for CDNA synthesis were complementary to the 5' end of the CHI domain of the heavy Chain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for CDNA synthesis are shown in AAQ97511-Q97518. The primer used for CDNA synthesis of the C variable region of a particular antibody polypeptide was also used for PCR amplification of that variable region, in conjunction with an appropriate V-region primer. In addition, the VH primer AAQ97518 was used to amplify the mAb 2D5 and 5B6 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given in AAQ97498-Q97510 and the deduced AA sequences in AAR79241-R79250 & AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45 and in the claims are different from the descriptions in the claims are different from the descriptions in the sequence listings are

Sequence

```
The variable region (AAW05822) of the humanised 1D10 antibody light chain (AAW05828) consists of human R3.5H5G kappa light chain variable region framework (substd. at 5 positions with mouse or consensus human amino acids) and complementarity determining regions from the murine 1D10 antibody specific for a 28/32 kDa heterodimeric antigen present on the surface of malignant B-cells. It can be coexpressed with humanised 1D10 heavy chain (see also AAW05829) in e.g. mouse myeloma NSO cells. Humanised antibody fragments can be incorporated into novel bispecific antibodies reactive with both effector cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Region

      The present sequence is the light chain variable region of the group 9f11 putative consensus anti-DNA monoclonal antibody (MAb), which has a high affinity for single stranded DNA, low or no affinity for double stranded DNA and specifically binds a DNA hairpin. The MAb can be used diagnose disorders associated with the pathological complexation of DNA, e.g. inflammatory glomerulonephritis and systemic lupus erythematosus. It can also be used to generate reagents to screen for pharmaceutical agents, and

                                                                  claimed are: photoaffinity compound-antibody conjugates produced this way, and immuno-conjugates comprising cytotoxic or therapeutic agent site-specifically attached to the photoaffinity compound in the conjugate. When the conjugate is labelled it is used for detection or quantitation of an antigen (Ag) by any standard immunoassay format, while immuno-conjugates are used therapeutically, e.g. in cases of tumours, infections or genetic diseases, or as imaging agents. The photoaffinity compounds are attached under mild, physiological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence was derived by aligning homologous anti-DNA MAb, whose sequences have been published, as well as several MAb of other specificities obtained from a database search.

It is used in the construction of a chimeric MAb comprising heavy and light chains having murine V regions and human C regions. The chimeric MAbs are more effective than murine MAb 2G12 since they have an increased compatibility in humans. The heavy and light chain V-regions are joined by manipulating their respective joining (J) regions, to generate restriction enzyme recognition sites. The chimeric MAbs can be used as immunoconjugates, in association with e.g. toxins for HIV treatment. They can also be used in diagnosis of HIV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC The present sequence is the light chain variable region of the murine anti-human glycoprotein (gp) 39 monoclonal antibody (MAb) CC 39-1.106 (a member of the murine kappa V subfamily). The MAb was prepd. by immunising a 6-8 week old BALB/c mouse with a g33-CD8 CC fusion protein, and 3 days later harvesting and fusing spleen and CC lymph cells to mouse melanoma cells, to produce an anti-human gp39 CC MAb producing hybridoma. The MAb may be useful for diagnosing CC disease states, inhibiting B-cell activation and for treating CC immunological disorders, e.g. autoimmune disorders, allergic CC responses, organ rejection and graft versus host disease. It may CC responses, organ rejection and graft versus host disease. It may CC responses, organ rejection and graft versus host disease. It may CC responses, organ rejection and graft versus host disease. It may CC responses, organ rejection and graft versus host disease. It may CC responses, organ rejection and graft versus host disease. It may CC such prim. and sec. responses to T-cell dependent antigens and Ab prodn. Specific to these antigens. A typical compsn. for intramuscular injection pref. contains 50 mg of MAb in 1 ml of sterile buffered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  disease states, inhibiting B-cell activation and for treating immunological disorders, e.g. autoimmune disorders, allergic responses, organ rejection and graft versus host disease. It may also be used for imaging cells which express gp39 on their surface, e.g. tumour cells, and to target therapeutic agents to such cells. The MAD inhibits the CO40/gp39 interaction, therefore limiting both prim. and sec. responses to T-cell dependent antigens and Ab prodn. specific to these antigens. A typical compsn. for intramuscular injection pref. contains 50 mg of MAD in 1 ml of sterile buffered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The humanised 1D10 antibody light chain (AAW05828) includes a variable region (see also AAW05822) consisting of human R3.5HG light chain variable region framework and complementarity determining regions from the murine 1D10 antibody specific for a 28/32 kDa antigen found on the surface of malignant B-cells. It can be coexpressed with humanised 1D10 heavy chain (see also AAW05829) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M291 heavy and light chain variable regions (see also AAW05826, AAW05830), and a second binding fragment comprising humanised 1D10 heavy and 115ht chain variable regions. Such antibodies are reactive with both T or NK cells and malignant B cells, and have therapeutic and diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is encoded by the PEJSKDEL fragment of the plasmid CC pULI40 and represents the heavy chain and light chain variable regions (VH and VL) of the monoclonal antibody (MAD) PRI. The cDNA encoding this sequence was derived by PCR amplification of reverse transcribed PRI-hybridoma RNA using the primer sequences given in AAQ64477-81. The CVH and VL complementarity determining regions (CDRs) are used in the CC construction of the MAD of the invention which competes with PRI CC invention can be used for targetting a drug, cytotoxin or radioisotope to prostate cells of a patient suffering from prostate cancer. It can also be used for diagnosing the presence of prostate cancer in an CC individual and for the diagnosis and treatment of other conditions involving abnormal growth of prostate cells, eg. benign prostate CC invention and the prostate cancer cells but conly weakly with a few other normal human tissues. The effect of therapy on normal prostate cells does not threaten the overall health CC therapy on normal prostate cells does not threaten the overall health

The polypeptide and its associated polynucleotide are used for the preparation of a pharmaceutical composition for the treatment of cancer, infections and/or autoimmune conditions. The cancer may be a tumour of the head and neck, stomach, oesophagus, colon, liver, intrahepatic bile ducts, pancreas, lung, larynx, breast, ovary, uterus, cervix, prostate, kidney, testis, thyroid, bladder or brain, or a melanoma, myeloma, sarcoma, leukaemia or lymphoma. The infectious diseases can be caused by viruses, bacteria, fungi, protozoa or helminths. The autoimmune diseases include multiple sclerosis, Grave's disease, ankylosing spondylitis, acute anterior uveitis, Goodpasture's syndrome, myasthenia gravis, insulin-dependent diabetes mellitus, rheumatoid arthritis, pemphigus vulgaris and autoimmune hepatitis. Sequences ANU72820-ANT72875 represent the NKG2D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a multifunctional polypeptide comprising a domain with a binding site that specifically recognises an extracellular group of the NKG2D receptor complex and a second domain which functions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Multifunctional polypeptides comprising binding sites that specifically recognise extracellular groups of the NKG2D receptor complex and domains which function as receptors or ligands, useful for treating cancers and infectious diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mayer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8G7C10; 6E5A7; 11B2D10x4-7; 8G7C10x4-7; 6E5A7x4-7; P4-2; P4-3; P4-14; P4-15; P5-2; P5-3; P5-9; P5-10; P5-11; P5-23; 3B10xP4-3; 3B10xP4-14; P53 tetramerisation domain; 3B10xP5-2; 3B10xP5-23.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by PCR; (2) the framework portion of the mouse type monoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody; (3) a gene encoding the amino acid tail is added to the single-stranded antibody gene of the human type monoclonal antibody to prepare a human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene is expressed in a microbe to prepare a human type single-stranded for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein against a receptor present on cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ABB05991

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC monoclonal antibody against an antigen present on cell surface and which CC can transfer a gene by combining with the gene and containing a human CC type single-stranded monoclonal antibody and a peptide which is the CC combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein and a method for the preparation of a monoclonal CC antibody-fused protein against a receptor present on cell surface in CC which: (1) an mRNA extracted from a hybridoma cell having productivity of CC said monoclonal antibody against a receptor present on cell surface is CC used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by PCR; (2) the framework portion of the CC mouse type monoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody; (3) a gene encoding CC the amino acid tail is added to the single-stranded antibody gene of the LC the human type single-stranded immunoporter gene; and (4) the human type single-stranded for the muman type single-stranded is a method for CC introducing the above complex of monoclonal antibody-fused protein of the CC monoclonal antibody-fused protein of the CC monoclonal antibody-fused protein for the preparation of a monoclonal antibody-fused protein for the preparation and monoclonal antibody-fused protein for the monoclonal antibody-fused protein for the preparation of a monoclonal antibody-fused protein for the preparation of a monoclonal antibody-fused protein for the surface. The method for the preparation of a monoclonal antibody-fused protein for the surface. The method for the preparation of the contract of the protein for the preparation of the contract of the protein for the preparation of the contract of the protein for the preparation of the contract of the protein for the protein for the protein for the protein for the protein for the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
Best Local
A protein fused with a monoclonal antibody against an antigen present
                                         WPI; 2002-135945/18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human type monoclonal antibody to prepare a human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene is expressed in a microbe to prepare a recombinant protein of the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein surface. The present sequence represents a protein sequence which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein and a DNA, and a method for the preparation of a monoclonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    on cell surfaces
                                 A protein fused with a monoclonal antibody against an antigen present on cell surfaces -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric - Mus sp.

```
CC combining site for the gene. Also described is a complex of a monoclonal contibody-fused protein which is a complex of monoclonal antibody-fused protein which is a complex of monoclonal contibody-fused protein against a receptor present on cell surface in complex of a monoclonal contibody-fused protein against a receptor present on cell surface in complex of a monoclonal antibody against a receptor present on cell surface is considered as the template to amplify a single-stranded antibody gene of a complex type monoclonal antibody by PCR; (2) the framework portion of the conset type monoclonal antibody is converted to prepare a single-stranded contibody gene of a human type monoclonal antibody is converted to prepare a single-stranded contibody gene of a human type monoclonal antibody to prepare a tranded antibody gene of the consent sype monoclonal antibody to prepare a moneyorter gene; and (4) the human type single-stranded continuon type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter controducing the above complex of monoclonal antibody-fused protein of the contradicting the above complex of monoclonal antibody-fused protein continuous antibody-fused protein continuous antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein antibody-fused protein sequence which is cover in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Example; Fig 13; 24pp; Japanese

The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface a can transfer a gene by combining with the gene and containing a type single-stranded monoclonal antibody and a peptide which is

and which

can transfer a gene by combining with the type single-stranded monoclonal antibody

Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein surface. The present sequence represents a protein sequence which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody-fused protein against a receptor present on cell surface in which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by PCR; (2) the framework portion of the mouse type monoclonal antibody by PCR; (2) the framework portion of the single monoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody; (3) a gene encoding the amino acid tail is added to the single-stranded antibody gene of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human monoclonal antibody related protein sequence CvC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclona antibody-fused protein which is a complex of monoclonal antibody-fused protein and a DNA, and a method for the preparation of a monoclonal antibody-fused protein against a receptor present on cell surface in

The present sequence represents a protein sequence which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein and a method for the preparation of a monoclonal antibody-fused protein against a receptor present on call antibody-fused protein against a receptor present on call antibody-fused
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A protein fused with a monoclonal antibody against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               몽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a course type monoclonal antibody by PCR; (2) the framework portion of the mouse type monoclonal antibody is converted to prepare a single-stranded cell antibody gene of a human type monoclonal antibody; (3) a gene encoding the amino acid tail is added to the single-stranded antibody gene of the human type monoclonal antibody to prepare a human type single-stranded immunoporter gene; and (4) the human type single-stranded immunoporter gene; and (4) the human type single-stranded in the complex of human type single-stranded immunoporter. Cleane is expressed in a microbe to prepare a recombinant protein of the human type single-stranded immunoporter. Also described is a method for through a cell surface receptor. The method is used for the preparation cell surface. The present sequence represents a protein sequence which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

The present invention describes a protein which is fused with a monoclonal antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein ada method for the preparation of a monoclonal antibody-fused protein against a receptor present on cell surface in which: (1) an mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on cell surface is used as the template to amplify a single-stranded antibody gene of a mouse type monoclonal antibody by PCR; (2) the framework portion of the
